Attention YP Members in Regions 1-6

Inspire Students in Today’s Virtual Learning Environment: Become an eMentor

IEEE Educational Activities is currently offering a unique volunteer opportunity for IEEE YP Members in Regions 1-6 to help make a difference in a child’s STEM education.

In today’s virtual learning environment, teachers are looking for creative ways to engage their students. Now, more than ever, the TryEngineering Together eMentoring Program is key in meeting the challenges that teachers face.

TryEngineering Together is an innovative, literacy-based eMentoring program that connects caring adult volunteers (eMentors) with 3rd to 5th grade students in under-served classrooms. Via online letters, volunteers and their student pen-pals discuss important STEM topics covered in the articles you read together. All communications are delivered digitally through the safe, online platform. In just a few hours a month, you can directly impact children as they gain confidence in their STEM skills.

The volunteer opportunity begins with a 1-hour training webinar in October. Communication with your student begins in late October and concludes in June. There are a limited number of spaces available. If you are interested in volunteering, please register no later than 10 September at:
